

## Mobile Application Development

Mobile technology and real-time media are enabling enterprise applications that put massive amounts of information, computing power, and collaboration and communication capabilities in the hands of end-users. No longer chained to desktops or tethered to laptops, users can quickly access, process and share the information they need to make sound decisions for successful mission outcomes.

The Telos Emerging Technologies Group can rapidly develop and deploy fully featured mobile applications for your organization. Our applications operate across a range of platforms and devices, and provide the highest level of enterprise security. We offer many tailorable off-the-shelf applications and can also custom-develop applications specifically for your requirements.

### WE DEVELOP FOR MULTIPLE PLATFORMS AND DEVICES

The mobile environment is a rich matrix of platforms and devices, requiring applications that can operate across a wide range of technologies. Telos offers applications that work on the leading hardware and operating systems, including Apple's iOS4, Android, Windows Phone 7, and RIM/BlackBerry. This range of flexibility means we can create an application that works specifically in the technology and user environment that's right for your organization.

### SECURE DEVELOPMENT FOR CRITICAL MOBILE REQUIREMENTS

Mobile applications from Telos feature built-in security and information assurance architecture to encrypt traffic, enable seamless roaming, and provide secure access to the enterprise network. As part of our secure wireless solutions work, we apply secure wireless standards such as DoD 8100.2 and FIPS 140-2 as well as our own industry-leading methodologies to assure compliance with regulations such as DIACAP, NIACAP, DCID, and NIST.

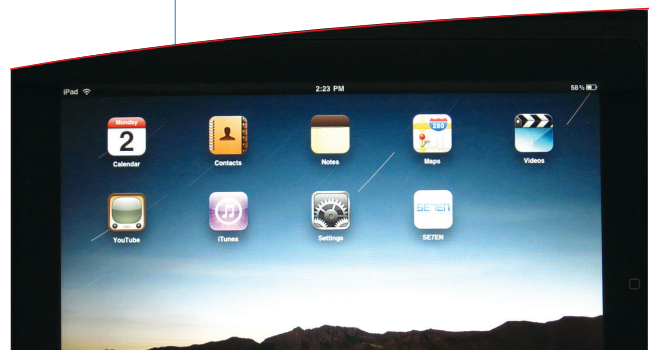

- Custom mobile applications for iOS4, Android, Windows Phone 7, and Blackberry devices
- Secure cross-platform mobile applications fully integrated into the SE7EN product line
- Collaborate on phones and tablets among multiple SE7EN applications

*Telos develops secure mobile applications for all leading platforms and devices.*

- Apple iOS 4
- Windows Phone
- Android
- Blackberry

### WE DEVELOP CUSTOM APPLICATIONS FOR YOUR ENTERPRISE

Telos can rapidly develop and deploy mobile applications that are customized to your user requirements and technical environment. These apps can feature videoconferencing and image sharing, Voice over IP, instant messaging and social media, location-based services with GPS capabilities, enterprise networking management, and others capabilities. Our rapid application development methodologies bring your solution online faster and more cost-effectively.

## **SE7EN** Telos SE7EN Multi-touch Framework

- The next generation multi-touch, multi-user platform
- Comprehensive visual presentation of real-time datasets
- Interoperability with existing and legacy systems
- Information sharing with restricted roles-based access control
- Collaborate across the SE7EN framework to provide a single common operating picture
- Fully auditable, real-time chat messaging, reachback capability and asset tracking across all SE7EN applications

In addition to our custom development capabilities, Telos offers its family of Telos: SE7EN applications that offer powerful multi-touch, interactive capabilities for government and commercial mobile applications. Users access information from SE7EN applications using a Natural User Interface (NUI) to simultaneously and collaboratively interact with digital content through the use of natural hand gestures and real-world objects. Users can interact with data and each other effectively, efficiently, and securely.

### **Please contact us for more information on mobile applications for your organization**

We can work with you to offer a Telos: SE7EN solution tailored to your needs or rapidly develop and deliver a custom secure mobile application that meets your specific requirements. Please contact us with your questions or for more information. We look forward to working with you to help you achieve your goals.

### **SE7EN: Command and Control (C2)**

Real-time surveillance monitoring, video and data sharing, and personnel collaboration for an enterprise-wide view of your facilities and real-time geo-location references of users and resources.

### **SE7EN: Project and Mission Planning**

Quickly plan, route and rehearse resource movements directly on top of digital geo-spatial images and data sets with timelines and mission stages that allow for easy mission planning management.

### **SE7EN: Geomapping**

Display the location of assets, buildings, personnel, and other resources with layers of geospatial data and images for a rich presentation of information you can manipulate and interact with.

### **SE7EN: Enterprise Network Management**

Manage and configure global enterprise networks, zooming in on a geographic location, a base, a series of buildings, a single building, room, or even a component of the network.
